JOSHUA LEDERBERG

February 26, 1979

PRESIDENT

The Honorable Alan Cranston  
United States Senate  
Washington, D.C. 20510

Dear Alan:

I am sorry I was caught up in moving to my new post here just when you so thoughtfully sent me your letter of August 11, 1978 about the regulation of DNA research. I am glad to see that the tide of opinion has now turned against any hasty legislation that might needlessly multiply regulatory burdens. I have never doubted that NIH, FDA and EPA already had more than sufficient authority. The present mood seems to be "sufficient unto the day..." , particularly in relation to many other really urgent problems.

Nevertheless it was rather shabby of me not to have replied for so long. Besides the manifest headaches of this large a move (personal and social as well as professional), I had a surgical problem in my shoulder that has only just cleared up.

So I hope I can be more responsive in future to your thoughtful communications.

Yours sincerely,

Joshua Lederberg
